1. Claims are allowed.

The prior art of record fails to suggest or disclose;

With regard to claim 1, a color imaging apparatus, comprising converting means for converting said first digital component signal into a second digital component signal which indicates an image having the same angle of view as said first digital component signal and which has the data rate of the luminance data and the first and second chroma data being $K \times N/M:N:N$, wherein M is a variable number dependent on the data rate control signal, and wherein the data rate control signal is changed by thinning luminance data without thinning color difference data.

With regard to claim 9, a method for generating digital component signal, comprising the steps of converting said first digital component signal into second digital component signal which indicates an image having the same angle of view as said first digital component signal and which has the data rate of the luminance data and the first and second chroma data being $K \times N/M:N:N$, wherein M is a variable number dependent on the data rate control signal, and wherein the data rate control signal is changed by thinning luminance data without thinning color difference data.
